

Applying Filter in a View

1. In the **View Editor**, select the column to be included in the view and for applying a filter.
2. In the table editor, double click on the first **Filter** cell of the selected column.
3. Enter the filter statement. Note that the syntax of statement and the functions available to call is **DBMS specific**. If you have questions about writing a query statement, consult your DBMS vendor.
4. Press **Enter** to confirm editing.

Database View

Summary

- Concept of database view
- Using join in a database view
- Using filter in a database view
