

EDT - Lab01: A ‘gentle’ Introduction to Coordinate Reference Systems.

			1	2	3	4	5	6	7
Criteria	Description	Points							
Hands-on Exercise: CRS Transformation & Data Integration	Correctly identify native CRSs and reproject both the Copernicus NDVI raster (EPSG:32618) and GADM Colombian administrative boundaries (EPSG:4326) into MAGNA-SIRGAS Origen Nacional (EPSG:9377).	25							
Autonomous Work: Professional Cartographic Layout	Design a high-quality map layout in QGIS containing the reprojected layers, configured with a metric grid (intervals in meters), scale bar, legend, north arrow, and essential cartographic elements adhering to Colombian standards.	25							
Independent Work: Introduction and Conclusion	Provide a clear introduction and conclusion summarizing the theoretical importance of CRSs, the transition to EPSG:9377, and the analysis findings.	10							
Independent Work: Quality of Writing	Ensure clarity, logical flow, proper use of geospatial terminology (e.g., CRS, EPSG, MAGNA-SIRGAS, NDVI), and professional technical narrative.	10							
Report Structure and Delivery	Submit a well-structured technical report in PDF format via Brightspace within the deadline, embedding the finalized map figure properly.	10							
Defense	Oral defense of the lab work, demonstrating technical mastery over coordinate transformations, grid configurations, and spatial analysis methodology.	20							
Total:		100
