

EDT

EDT: GIS Project - Phases 1, 2 & 3

				1	2	3	4	5	6	7
Phase	Criteria	Description	Points							
1	Event Selection & ROI	Clear definition of the "Before" t1 and "After" t2 dates. Accurate creation of a GeoPackage to clip the study area.	5							
	Data Sourcing	Selection of appropriate satellite imagery (Sentinel-2, Landsat 8/9, or Sentinel-1 for SAR).	10							
2	Atmospheric Correction	Evidence that images are Bottom-of-Atmosphere (BOA/Level-2A) to ensure physical reality is reflected.	10							
	Geometric Integrity	Successful co-registration (pixel alignment between t1 and t2) and resampling to a consistent spatial resolution if multiple sensors are used.	15							
	Cloud Masking	Effective use of QA bands to remove interference.	10							
3	Algorithm Selection	Selection and justification of appropriate methods such as Spectral Indices (NDVI, NDWI, NBR, etc.) or Image Differencing.	20							
	Technical Implementation	Correct calculation of indices and/or supervised classification (e.g., Random Forest, SVM) for both dates.	20							
	LaTeX Documentation	All methods and preliminary results must be documented using the provided LaTeX template as required by the submission guidelines	10
