D B S

DBS - Final Project: Part B.

Criteria	Description	Points	1	2	3	4	5	6
Final ER, Schema & Data Dictionary	Refined and complete conceptual ER diagram, relational schema and updated Data Dictionary incorporating feedback from Part A.	15						
DDL Implementation & Integrity	Clean, executable DDL scripts in the chosen DBMS (e.g., PostgreSQL) properly enforcing primary keys, foreign keys, data types, and domain/ethics constraints.	15						
ETL Pipeline & Data Ingestion	Functional ingestion scripts and staging tables (TSV -> staging -> core) with data validation, type casting, deduplication and malformed record handling.	20						
Real Dataset & UX Population	Database populated with real gameplay telemetry (>3 episodes, 6+ players, >20K rows telemetry) and real UX survey responses for all team members.	20						
Report Structure & Reproducibility	Well-structured, readable report documenting schema updates, ETL workflow, sample raw logs, and clear instructions/scripts to reproduce the database setup.	10						
Defense	Oral presentation or defense demonstrating understanding of schema refinements, ETL design decisions, data validation, and live database inspection.	20						
	Total:	100
