EDT: DS Project - Week 2

Criteria	Description	Points	1	2	3	4	5	6	7
Study area	Clear definition of the study area and its boundaries.	5							
Dataset construction	Clear selection of training polygons and script to build the final dataset. The final dataset must be ready for modelling.	20							
Dataset documentation	Evidence of steps for the dataset construction.	5							
Initial models	At least four out of five models were built and documented.	25							
Intial evaluation	Metrics for model comparisson are present (at least confussion matrix and overall accuracy).	25							
Technical report	Correct calculation of indices and/or supervised classification (e.g., Random Forest, SVM) for both dates.	10							
Defense	All methods and preliminary results must be documented using the provided LaTeX template as required by the submission guidelines	10							
		100
