Table 1: Rubric for Lab: Backup & Restoring

Criteria	Exemplary (10–9 pts)	Competent (8–7 pts)	Developing (6–4 pts)	Insufficient (3–0 pts)	Weight
Database Setup	Successfully created and populated a database with SUMO/TAPAS data using scripts or tools; schema design is clear and efficient.	Database created and populated, but minor inefficiencies or unclear schema design.	Database partially populated, schema has significant flaws or inconsistencies.	Database not created or incomplete.	20%
Backup & Restore Tool Configuration	Correctly installed and configured chosen B&R tool (open-source or commercial); demonstrates automated periodic backups.	Configured tool but with minor errors; periodic backups not fully automated.	Tool used only manually or inconsistently; limited understanding shown.	No functional tool setup.	25%
Catastrophic Event Simulation	Realistic data loss simulated (e.g., DELETE injection); clearly documented; integrates well with backup cycle.	Event simulated but with limited scope or minor issues in documentation.	Event simulated partially or with unclear execution steps.	Event not simulated.	15%
Recovery & Analysis	Fully demonstrates recovery process; evaluates effectiveness and limitations of the B&R tool; compares recovered vs. lost data.	Recovery demonstrated, but evaluation of effectiveness is brief or incomplete.	Recovery attempted but incomplete; weak analysis of effectiveness.	No recovery shown.	15%
Presentation & Communication	Clear, engaging presentation; explains technical process, challenges, and insights; excellent visuals and structure.	Presentation covers main points but lacks depth or clarity in some areas.	Presentation incomplete, poorly structured, or difficult to follow.	No presentation or major parts missing.	10%
Oral Defense	Team members demonstrate high proficiency in using the tools and following the process steps; both answer questions accurately and thoroughly.	Team members demonstrate adequate proficiency with tools/steps; answers are mostly accurate with minor gaps.	Limited proficiency demonstrated with tools/steps; answers are vague, incomplete, or uneven between members.	Unable to demonstrate tool proficiency or answer questions about the process.	10%
Collaboration & Peer Evaluation	Actively participates in auto- and co-evaluation; provides constructive peer feedback.	Participates but feedback is limited or superficial.	Minimal peer feedback given.	No participation in evaluation.	5%
